Introduction

DK-2800 MK-II+ Series Wi-Fi Keypads and Wi-Fi Receiver are designed with a new and sophisticated concept of IoT. The keypads are more intelligent and can be expandable to have three operation modes. 1. Standalone, 2. Split-Decoded and 3. Multi-Station. The keypads have the same programming method and very user friendly.

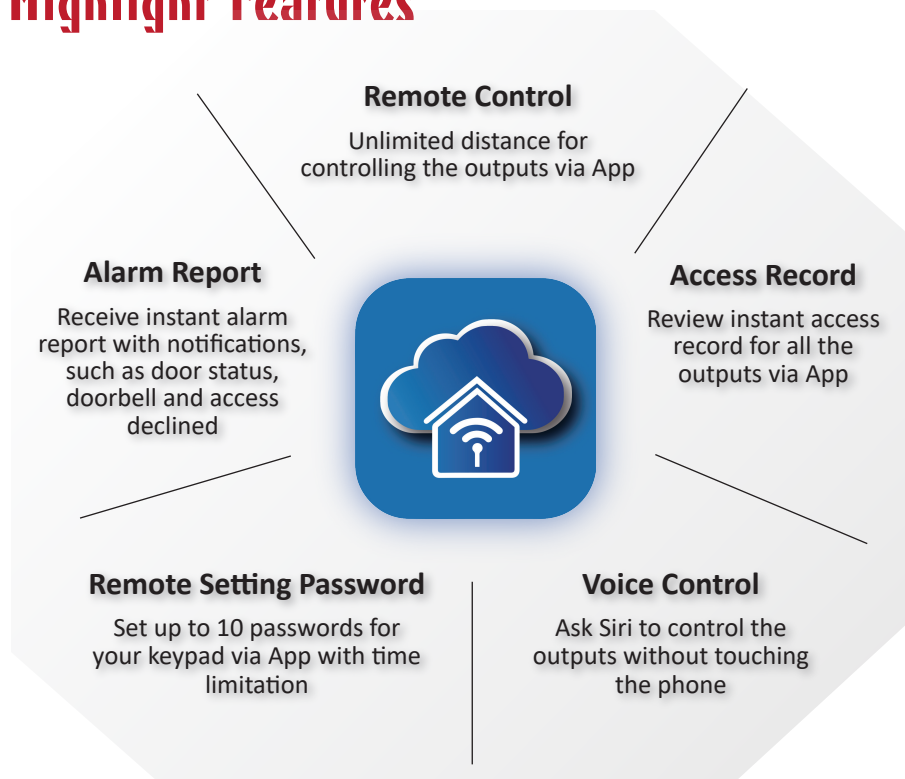

End-User can decide to upgrade the keypad into a Wi-Fi version, by adding the Wi-Fi Module. Once a Wi-Fi Module is added, the end-user can get more features, such as remote control, remote setting password, receive alarm & access record and voice control. All the password and card information are saved in the keypad and encrypted, which ensures all the access information are not on the internet.

The DK-2800 MK-II+ Series consists keypad of vandal resistant, weatherproof, indoor, surface and flush mount, which is suitable for various application environments.

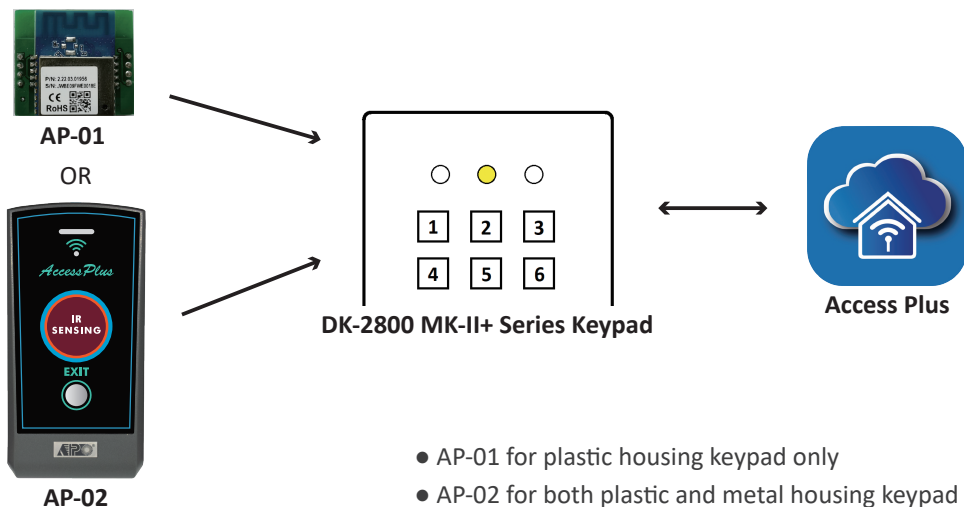

- Unlimited distance
with internet connection
